

Bayfolan[®]

FOLIAR FEED

A balanced complete foliar
fertiliser for use in all crops

Bayer CropScience

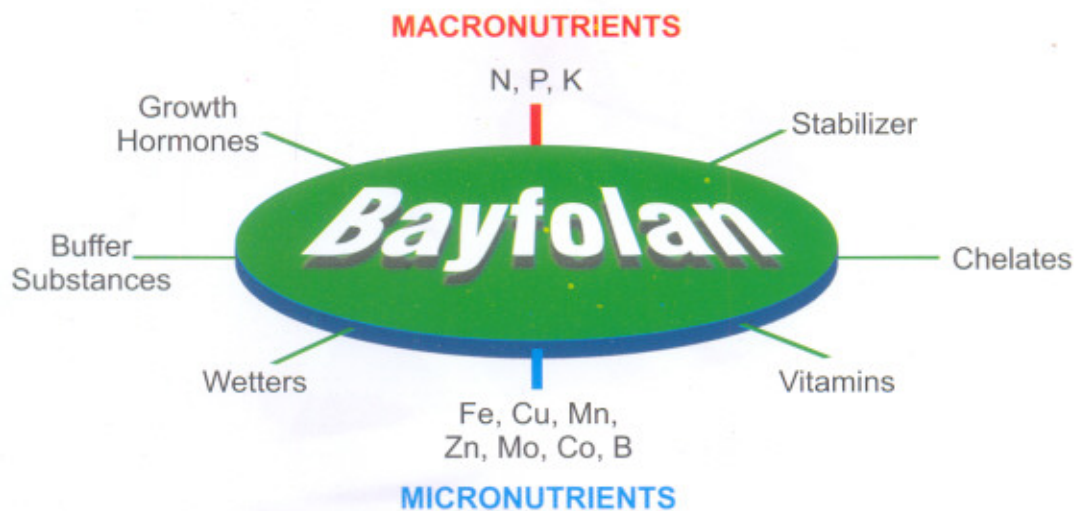

Bayfol

BAYFOLAN[®]

Bayfolan[®] is a complete chelated foliar fertiliser with growth promoting hormones for use in all crops.

Composition of Bayfolan[®]

Bayfolan[®] contains 11% N, 8% P₂O₅, 6% K₂O, the trace elements iron (0.0190%), manganese (0.0162%), boron (0.0102%), copper (0.0081%), zinc (0.0061%), cobalt (0.00035%), molybdenum (0.0009%) as well as chlorine, sodium, sulphur, buffering substances, vitamins and growth promoting hormones.

olan[®]

Main Features

- Well balanced formulation for maximum crop response.
- Rapid and effective absorption through the leaves.
- Micro nutrients are available in chelates (micronized)
- Fast acting with nutrients rapidly becoming available to the plant.
- Boosts crop yields.
- Enhances crop quality.
- No leaching.
- Provides supplementary feeding of a balanced fertiliser under heavy cropping conditions.
- Provides supplementary feeding in wet or dry soils that inhibits normal plant nutrient uptake.
- Has more micro nutrients than other foliar fertilisers

Application Rates and Timing

Crop	Rate per ha	Rate per 20lt of water	Timing
Coffee	2.5lt	50 ml	21-28 days interval
Potatoes & Tomatoes	2.5lt	50 ml	14 days interval
Ornamentals	2.5lt	50 ml	14 days interval
Wheat & Barley	2.5lt	125 ml	Two applications: one at 4 leaf stage (tillering) and one at booting stage based on water volume of 400 litres per hectare
Pineapples	2.5lt	50 ml	28 days interval
Fruit trees & Vines	2.5lt	50 ml	14 days interval after fruit sets
Rice	2.5lt	50 ml	3 applications at 21 day intervals starting 20 days after emergence

Note:

Bayfolan[®] may be applied alone or in tank mixtures with Bayer insecticides, fungicides and herbicides.
